

BUZZORBOO

MARKET BIBLE

Version 0.5 | Working Product Blueprint

CALL WHAT'S NEXT.

1. What BuzzOrBoo Is

BuzzOrBoo is a visual forecasting platform for the things people actually talk about: restaurants, neighborhoods, real estate, weather, fashion, interiors, retail, nightlife and culture. The prediction-market mechanism sits underneath the experience; the consumer promise is simpler: see what is gaining momentum, make a call before everyone else, and build a public record of how good you are at seeing what comes next.

Core consumer promise: **Call what's next.**

Launch wedge: Boston + Home & Interiors + Fashion & Style. The local layer creates daily relevance; longer-horizon style and home markets create cultural identity and differentiated data.

2. Product Principles

- **Forecasting, not gambling:** The first product uses points/reputation, not cash. The interface emphasizes probability, insight and track record.
- **Sexy question, boring rules:** Display copy can be playful; resolution criteria must be objective, auditable and precise.
- **Local first:** Density in one city is more valuable than thin usage everywhere. Boston is the proving ground.
- **Visual first:** Photography, neighborhood identity, editorial design and simple probabilities should dominate the interface.
- **Reputation compounds:** A user's history matters. The product should reward calibration and category expertise, not loud certainty.
- **Markets are content:** Resolved markets leave a searchable cultural record and continuously generate new questions.
- **Data becomes intelligence:** Consumer forecasting can later support trend dashboards, research products and B2B intelligence.

3. Launch Taxonomy

Boston / City — Weather, restaurants, development, rents, neighborhoods and city outcomes.

Home & Interiors — Colors, materials, furniture, kitchens, finishes and aesthetics.

Fashion & Style — Color, silhouettes, footwear, accessories and aesthetics.

Local Pulse — Restaurants, bars, coffee, retail, fitness, hotels, openings and local business momentum.

Local Social & Culture — Neighborhood buzz, creators, viral businesses, nightlife, events, pop-ups and local brands.

4. Market Formats

Format	Mechanic	Example
Binary	YES / NO	Will Restaurant X reach 4.6 stars by Oct. 31?
Head-to-head	A / B	Which restaurant gains more reviews

		this month?
Multi-choice	3–6 outcomes	Which color family grows fastest this fall?
Threshold	Above / below a number	Will Boston receive >1 inch of rain next week?
Range	Outcome bands	What price range will this condo close in?
Rank / race	First or highest	Which announced retailer opens first?

5. Market Rule Standard

Every live market must have an internal rule record. If any required field is missing, the market does not publish.

- Market ID
- Display title
- Canonical question
- Category/subcategory
- Geography
- Market format
- Open timestamp
- Close timestamp
- Resolution timestamp/window
- Primary resolution source
- Backup source
- Starting value/snapshot
- Exact calculation
- Rounding rule
- Tie rule
- Cancellation/void criteria
- Evidence archive
- Moderator notes

6. Resolution Source Hierarchy

Tier 1 — Official/public records: NOAA/NWS, government data, deed/registry records, official event announcements.

Tier 2 — First-party business sources: Official business site, ticketing page, official social account, official opening announcement.

Tier 3 — Defined third-party datasets: Google ratings/review counts, Google Trends, designated real-estate/rental dataset, defined reservation platform.

Tier 4 — BuzzOrBoo measurement: A documented composite or sampling methodology maintained by BuzzOrBoo; methodology must be published before market open.

7. Scoring & Reputation — MVP

Users receive 10,000 Forecast Points with no cash value. The MVP should prioritize probabilistic accuracy over simple win/loss counting. A Brier-style score can power calibration internally while the consumer sees a simpler 0–100 BuzzScore.

- Prediction: user selects a probability from 1% to 99% (or chooses an outcome in a multi-choice market).
- Lock: the prediction is timestamped; edits are allowed until market close but the full history is retained.
- Resolution: the final outcome is recorded with evidence.
- Calibration: repeated 70% calls should resolve YES roughly 70% of the time.
- Category expertise: separate Home, Style, Boston, Property, Food, Weather and Culture scores.
- Leaderboard eligibility: require a minimum number of resolved markets to prevent one lucky call from topping rankings.
- Points: use for participation/status; do not let raw point balance substitute for forecasting skill.

8. Core Consumer Language

Term	Meaning
What's Buzzing	Personalized discovery feed
Buzz	Positive / happening / likely call
Boo	Negative / not happening / unlikely call
Buzz Battle	Head-to-head market
Early Buzz	Emerging market or fast-rising probability
BuzzScore	Market or user forecasting score
BuzzRank	Leaderboard position
My Calls	Open predictions
Called It	Resolved predictions the user nailed
Boston Buzz	City-specific feed

9. The 120-Market Library

These are launch-ready templates, not a requirement that all 120 be live simultaneously. A healthy first feed may have 40–60 live markets while others are scheduled, awaiting data, or archived.

Boston / City — Markets 1-25

#	Display title	Market question	Type	Duration	Resolution
1	RAINY WEEK	Will Boston record measurable rain on 4+ days during the specified Monday–Sunday week?	Binary	7d	NOAA/NWS daily observations
2	RAIN TOTAL	Will Boston receive more than 1 inch of total rainfall next week?	Threshold	7d	NOAA/NWS
3	90° WEEKEND	Will Boston's high temperature reach 90°F or higher this weekend?	Binary	2–3d	NOAA/NWS
4	FIRST SNOW	Will Boston record its first measurable snowfall before Dec. 1?	Binary	Seasonal	NOAA/NWS
5	12-INCH MONTH	Will Boston receive 12+ inches of snow during the specified winter month?	Threshold	1mo	NOAA/NWS
6	COLD BEFORE 12/15	Will Logan Airport record a temperature below 20°F before Dec. 15?	Binary	Seasonal	NOAA/NWS
7	WHITE CHRISTMAS	Will Logan have ≥1 inch snow depth at the defined Christmas observation time?	Binary	Seasonal	NOAA/NWS
8	SNOWY YEAR	Will Boston annual snowfall finish above its 30-year climatological average?	Binary	Annual	NOAA/NWS
9	LOGAN CANCELS	Will Logan report 100+ flight cancellations on the specified storm day?	Threshold	1d	Designated flight-data source
10	GREEN LINE WATCH	Will MBTA announce a major Green Line service shutdown before the specified date?	Binary	30–90d	MBTA official announcements
11	OPEN ON TIME	Will the named Boston restaurant open by its publicly announced date?	Binary	30–180d	Official business announcement
12	CLOSING WATCH	Will the named Boston restaurant permanently close before year-end?	Binary	To 12/31	Official business / verified closure source
13	FIRST SATURDAY	Will a named new restaurant sell out defined prime-time reservations for its first Saturday?	Binary	Opening wk	Designated reservation platform

14	OPENING NEIGHBORHOOD	Which Boston neighborhood records the most qualifying restaurant openings this quarter?	Multi	Quarter	Published BuzzOrBoo opening criteria
15	DINING RECOGNITION	Will the named restaurant earn the specified dining award/recognition this year?	Binary	Annual	Award publisher
16	CONVENTION COUNT	Will Boston host more than X qualifying major conventions this quarter?	Threshold	Quarter	Convention authority / published calendar
17	PROJECT OPENING	Will the named development project open by its announced date?	Binary	30–365d	Developer / city source
18	STOREFRONT TENANT	Will the named vacant storefront have a new tenant announced before Dec. 31?	Binary	To 12/31	Landlord/business/ public filing
19	1BR RENT WATCH	Will average advertised Boston 1BR rent rise YoY by the specified date?	Binary	Monthly	Designated rental dataset
20	CONDO MEDIAN	Will Boston median condo sale price be higher in Q4 than prior-year Q4?	Binary	Quarter	Designated real-estate dataset
21	BACK BAY \$/SF	Will Back Bay median condo price/sq.ft. increase YoY this quarter?	Binary	Quarter	Designated real-estate dataset
22	ABOVE ASKING	Will the featured Boston listing sell above its original asking price?	Binary	Listing	Registry/MLS licensed data
23	14-DAY AGREEMENT	Will the featured listing go under agreement within 14 days?	Binary	14d	MLS/licensed listing data
24	+\$50K	Will the featured property close >\$50,000 above original asking?	Threshold	Listing	Registry/MLS licensed data
25	NEIGHBORHOOD PRICE RACE	Which featured Boston neighborhood shows strongest quarterly home-price growth?	Multi	Quarter	Designated real-estate dataset

Home & Interiors — Markets 26–48

#	Display title	Market question	Type	Duration	Resolution
26	DARK vs LIGHT WOOD	Will 'dark wood furniture' search interest exceed 'light wood furniture' in the specified month?	Head-to-head	1mo	Google Trends, defined geography/query
27	WALNUT vs	Will walnut outperform white	Head-to-head	Annual	Google Trends methodology

	WHITE OAK	oak in furniture-search growth this year?			
28	CHROME vs BRASS	Will chrome bathroom-fixture search interest surpass brass by year-end?	Head-to-head	To 12/31	Google Trends
29	NICKEL vs MATTE BLACK	Will polished nickel grow faster than matte black fixture searches this year?	Head-to-head	Annual	Google Trends
30	OXBLOOD TOP 5	Will burgundy/oxblood become a Top-5 interior color family in the defined design dataset next year?	Binary	Annual	Predefined editorial/search dataset
31	BROWN vs SAGE	Will chocolate brown outperform sage green in interior-design search growth?	Head-to-head	Quarter	Google Trends
32	BUTTER YELLOW	Will butter yellow remain a Top-10 interior color search term six months from now?	Binary	6mo	Defined query ranking
33	RED vs GREEN KITCHENS	Will red kitchens outperform green kitchens in YoY search growth?	Head-to-head	Annual	Google Trends
34	DARK CABINETRY	Will dark kitchen cabinetry gain search share against white cabinetry this year?	Binary	Annual	Google Trends
35	STONE vs QUARTZ	Will natural-stone countertops gain search share against engineered quartz?	Head-to-head	Annual	Google Trends
36	CHECKERBOARD	Will checkerboard flooring search interest be higher next spring than this spring?	Binary	YoY	Google Trends
37	CARPET COMEBACK	Will wall-to-wall carpet search interest increase YoY?	Binary	Annual	Google Trends
38	HIGH-GLOSS	Will high-gloss lacquer furniture searches rise at least 20% YoY?	Threshold	Annual	Google Trends
39	SKIRTED SOFA	Will skirted-sofa search interest reach a new five-year high by the specified date?	Binary	6–12mo	Google Trends
40	CURVED SOFA COOL-OFF	Will curved-sofa searches decline from the prior-year peak?	Binary	Annual	Google Trends
41	BOUCLÉ DOWN?	Will bouclé furniture searches decline YoY?	Binary	Annual	Google Trends

42	TRADITIONAL vs MINIMAL	Will traditional furniture outperform minimalist furniture in search growth?	Head-to-head	Annual	Google Trends
43	MAXIMAL vs MINIMAL	Will maximalist interior searches outperform minimalist interior searches this quarter?	Head-to-head	Quarter	Google Trends
44	ENGLISH COUNTRY	Will 'English country interior' searches increase 25%+ YoY?	Threshold	Annual	Google Trends
45	ART DECO vs MCM	Will Art Deco interior search growth exceed mid-century modern growth?	Head-to-head	Quarter	Google Trends
46	WALLPAPER UP	Will wallpaper continue gaining search interest YoY?	Binary	Annual	Google Trends
47	PATTERN vs SOLID	Will patterned upholstery outperform solid upholstery in the defined editorial dataset?	Head-to-head	Quarter	Published content-sampling method
48	MATERIAL RACE	Which material grows fastest next year: walnut, travertine, stainless steel, lacquer or rattan?	Multi	Annual	Google Trends methodology

Fashion & Style — Markets 49–71

#	Display title	Market question	Type	Duration	Resolution
49	COLOR RACE	Which color family shows greatest womenswear search growth this fall?	Multi	Season	Google Trends
50	BURGUNDY TOP 5	Will burgundy remain a Top-5 womenswear color by next fall?	Binary	12mo	Defined search/editorial dataset
51	BROWN vs BLACK	Will chocolate brown outperform black in YoY fashion search growth this season?	Head-to-head	Season	Google Trends
52	BUTTER YELLOW HOLD	Will butter yellow remain above its prior-year search level next spring?	Binary	YoY	Google Trends
53	POWDER BLUE vs YELLOW	Will powder blue outperform butter yellow in womenswear search growth?	Head-to-head	Season	Google Trends
54	PANTONE FAMILY	Will Pantone's next Color of the Year fall within the defined blue/green family?	Binary	Annual	Pantone official announcement
55	SKINNY vs WIDE	Will skinny-jeans	Head-to-head	6–18mo	Google Trends

		search interest surpass wide-leg jeans before the specified date?			
56	STRAIGHT vs WIDE	Will straight-leg jeans outperform wide-leg jeans in YoY search growth?	Head-to-head	Annual	Google Trends
57	LOW-RISE HIGH	Will low-rise jeans reach a new five-year search high?	Binary	12mo	Google Trends
58	CAPRI HOLD	Will capri-pants search interest remain above its prior-year level next summer?	Binary	YoY	Google Trends
59	BALLET vs LOAFER	Will ballet flats remain more searched than loafers in the specified spring month?	Head-to-head	1mo	Google Trends
60	BOAT SHOE BOOM	Will boat-shoe search interest grow at least 25% YoY?	Threshold	Annual	Google Trends
61	DRESS SHOE RETURN	Will dress-shoe search growth outperform sneaker search growth?	Head-to-head	Quarter	Google Trends
62	SILVER vs GOLD	Will silver jewelry surpass gold jewelry in search growth before year-end?	Head-to-head	To 12/31	Google Trends
63	BROOCH WATCH	Will brooch searches continue rising YoY?	Binary	Annual	Google Trends
64	BIG BAG vs MINI	Will oversized handbags outperform mini bags in search growth?	Head-to-head	Season	Google Trends
65	SUEDE vs LEATHER	Will suede handbags outperform leather handbag growth during fall?	Head-to-head	Season	Google Trends
66	ANIMAL PRINT PEAK	Will animal-print clothing searches exceed their prior five-year peak?	Binary	12mo	Google Trends
67	POLKA vs STRIPE	Will polka dots outperform stripes in womenswear search growth this year?	Head-to-head	Annual	Google Trends
68	SHEER UP	Will sheer-clothing search interest increase YoY during spring/summer?	Binary	Season	Google Trends
69	TAILORING vs ATHLEISURE	Will tailoring-related womenswear searches outperform athleisure growth this year?	Head-to-head	Annual	Google Trends
70	MAXIMAL vs QUIET	Will maximalist fashion outperform	Head-to-head	6mo	Google Trends

		'quiet luxury' in search growth over six months?			
71	AESTHETIC RACE	Which aesthetic grows fastest next year: bohemian, prep, minimalist, romantic or 1980s-inspired?	Multi	Annual	Google Trends methodology

Local Pulse — Markets 72-101

#	Display title	Market question	Type	Duration	Resolution
72	RESTAURANT FACE-OFF	Which restaurant gains more new Google reviews over the next 30 days?	Head-to-head	30d	Google review-count snapshots
73	STAR WATCH	Will the named restaurant reach 4.6★ on Google by the specified date?	Threshold	30–90d	Google rating snapshots
74	HOLD THE RATING	Will the new restaurant maintain 4.5★+ after reaching 250 Google reviews?	Binary	Milestone	Google rating/review count
75	WHO'S HOTTER?	Which of two new restaurants has the higher Google rating 90 days from today?	Head-to-head	90d	Google rating
76	BUZZ BATTLE	Which restaurant gains more Google reviews this weekend?	Head-to-head	Weekend	Google review-count snapshots
77	RESERVATION WATCH	Will the restaurant show no defined prime-time Saturday availability 7 days ahead for four consecutive weeks?	Binary	4wk	Designated reservation platform
78	STILL HOT?	Will the restaurant remain below the defined prime-time availability threshold 90 days after opening?	Binary	90d	Designated reservation platform
79	THE 1,000 CLUB	Will the restaurant reach 1,000 Google reviews before the specified date?	Threshold	30–180d	Google review count
80	RISING STAR	Will the restaurant's Google rating increase by at least 0.2 stars in 90 days?	Threshold	90d	Google rating snapshots
81	FALLING STAR	Will the restaurant's Google rating decrease by at least 0.2 stars in 90 days?	Threshold	90d	Google rating snapshots
82	NEW RESTAURANT RACE	Which nominated new Boston restaurant has the highest Google rating six months after opening?	Multi	6mo	Google rating + minimum review rule
83	MOST TALKED	Which nominated Boston restaurant	Multi	1mo	Google review-count snapshots

	ABOUT	gains the most Google reviews this month?			
84	NEIGHBORHOOD FOOD FIGHT	Which of two neighborhoods records more qualifying new restaurant openings this quarter?	Head-to-head	Quarter	BuzzOrBoo opening registry
85	OPENING WATCH	Will the named restaurant open by its announced opening date?	Binary	Opening	Official source
86	DELAYED AGAIN?	Will the anticipated restaurant delay opening beyond the specified date?	Binary	Opening	Official source
87	LAST CALL	Will the named restaurant/bar permanently close before year-end?	Binary	To 12/31	Official/verified closure source
88	SECOND LOCATION	Will the local restaurant announce another Massachusetts location before the specified date?	Binary	6–12mo	Official announcement
89	BOSTON → NYC	Will the named Boston restaurant/chef announce a New York location before the specified date?	Binary	6–12mo	Official announcement
90	BAR BATTLE	Which cocktail bar gains more Google reviews over the next 60 days?	Head-to-head	60d	Google review-count snapshots
91	COFFEE WARS	Which coffee shop gains more new Google reviews this month?	Head-to-head	1mo	Google review-count snapshots
92	NEWBURY WATCH	Will the named vacant Newbury Street storefront have a new tenant announced before the specified date?	Binary	30–180d	Official/landlord/public source
93	RETAIL OPENING RACE	Which announced Boston retailer opens first?	Multi	Opening	Official opening evidence
94	STORE SCORE	Will the new store achieve 4.5★+ on Google after its first 100 reviews?	Binary	Milestone	Google rating/review count
95	FITNESS BATTLE	Which Boston fitness studio gains more Google reviews over the next 90 days?	Head-to-head	90d	Google review-count snapshots
96	EXPANSION WATCH	Will the named fitness/wellness brand announce another Boston-area location before year-end?	Binary	To 12/31	Official announcement
97	SELL-OUT WATCH	Will the named Boston event	Binary	Event	Official ticketing/organizer

		officially sell out before its scheduled date?			
98	BUZZ BEFORE THE SHOW	Will resale prices for the named event exceed face value by X% seven days before the event?	Threshold	Event	Designated resale source + basket rule
99	HOTEL HEAD-TO-HEAD	Which Boston hotel has the higher Google rating on the specified date?	Head-to-head	30–90d	Google rating
100	NEIGHBORHOOD HEAT CHECK	Which neighborhood gains the most combined new Google reviews across the defined hospitality basket this quarter?	Multi	Quarter	Published basket + Google snapshots
101	HOTTEST IN BOSTON	Which of five nominated restaurants has the greatest percentage growth in Google review count over 30 days?	Multi	30d	Google review-count snapshots

Local Social & Culture — Markets 102–120

#	Display title	Market question	Type	Duration	Resolution
102	THE HOT NEIGHBORHOOD	Which Boston neighborhood shows the greatest growth in the defined local-buzz index this month?	Multi	1mo	Published BuzzOrBoo local-buzz index
103	NEIGHBORHOOD FACE-OFF	Which neighborhood gains more restaurant/bar Google reviews this month?	Head-to-head	1mo	Defined business basket + Google snapshots
104	STILL COOL?	Will the named venue maintain or increase monthly Google-review volume 90 days from now?	Binary	90d	Google review-count snapshots
105	VIRAL → REAL	Will the named Boston business reach 50K Instagram followers before the specified date?	Threshold	30–180d	Public Instagram follower count
106	CREATOR WATCH	Will the named Boston creator reach 100K followers before the specified date?	Threshold	30–180d	Defined social platform count
107	CREATOR FACE-OFF	Which Boston creator gains more followers over the next 30 days?	Head-to-head	30d	Defined social platform snapshots
108	THE VIRAL DISH	Will engagement around the named restaurant/dish remain above the	Binary	60d	Published social measurement method

		predefined threshold 60 days from now?			
109	FOOD TREND BATTLE	Which Boston food trend generates more defined search/social growth this month?	Head-to-head	1mo	Google Trends + defined social source
110	NIGHTLIFE HEAT CHECK	Which Boston nightlife venue gains more Google reviews over the next four weekends?	Head-to-head	4wk	Google review-count snapshots
111	STILL PACKED?	Will the new bar/club maintain the defined weekend activity threshold three months after opening?	Binary	90d	Published activity proxy
112	POP-UP → PERMANENT	Will the named Boston pop-up announce a permanent location before the specified date?	Binary	30–180d	Official announcement
113	DIGITAL → PHYSICAL	Will the named Boston online brand announce its first permanent storefront before year-end?	Binary	To 12/31	Official announcement
114	LOCAL BRAND WATCH	Will the named Boston brand reach the specified followers/reviews/locations milestone before the date?	Threshold	30–180d	Defined public source
115	EVENT BREAKOUT	Which nominated new Boston event series shows the greatest defined attendance/sellout growth this season?	Multi	Season	Official ticketing/attendance method
116	HOW FAST?	Will the named event sell out within 24 hours of tickets going on sale?	Binary	24h	Official ticketing source
117	WHERE'S EVERYONE GOING?	Which neighborhood's defined hospitality basket gains the most new Google reviews this weekend?	Multi	Weekend	Published basket + Google snapshots
118	SUMMER HOT SPOT	Which neighborhood records strongest hospitality-buzz growth from Memorial Day through Labor Day?	Multi	Season	Published local-buzz index
119	BOSTON BREAKOUT	Which nominated new local business has the greatest percentage growth in Google reviews	Multi	90d	Google review-count snapshots

		over 90 days?			
120	AHEAD 100 / TOP 100 BREAK-IN	Will a business currently outside the defined BuzzOrBoo Boston Top 100 enter it before next quarterly ranking?	Binary	Quarter	Published BuzzOrBoo ranking methodology

10. Signature Recurring Franchises

HOTTEST IN BOSTON — Monthly five-restaurant race based on percentage growth in Google review count. Designed to be screenshot-friendly and editorial.

BUZZ BATTLE — Head-to-head restaurant, bar, coffee, retail, creator or neighborhood competition.

STAR WATCH — Will a business hit or hold a defined Google rating by a date/milestone?

OPENING WATCH — Will an anticipated restaurant, retailer, hotel or development open on time?

PROPERTY WATCH — Featured listing: above asking, under agreement in 14 days, closing-price band.

COLOR RACE — Seasonal fashion/interior color competition.

MATERIAL RACE — Which finish/material grows fastest over a defined period?

BOSTON THIS WEEK — Fast-turn weather, events, reservations and neighborhood markets.

11. Local Buzz Index — Draft Framework

For subjective-sounding concepts such as 'hot neighborhood' or 'still cool,' BuzzOrBoo should publish a fixed measurement formula before the market opens. The MVP should keep the index simple and auditable rather than pretending to measure everything.

Illustrative components (weights to be tested, not final):

- Growth in Google review counts across a fixed basket of qualifying local businesses.
- New qualifying business openings during the period.
- Search-interest growth for the neighborhood + dining/nightlife terms.
- Defined event/sellout activity where reliable data exists.
- No manual editorial override after a market opens.

12. Example Market Card Specification

Display title: HOTTEST IN BOSTON

Eyebrow: BOSTON · RESTAURANTS · 30 DAYS

Question: Which restaurant will grow its Google review count the fastest this month?

Outcomes: Restaurant A 31% · Restaurant B 27% · Restaurant C 19% · Restaurant D 14% · Restaurant E 9%

Social proof: 27,491 calls

CTA: MAKE YOUR CALL

Rules drawer: starting review counts, end timestamp, percentage-growth formula, tie rule and resolution evidence.

13. Admin Data Model

Field	Purpose
market_id	Unique immutable identifier
slug	Human-readable URL key
display_title	Short branded title
question	Canonical resolvable question
category	Primary category
subcategory	Restaurant / color / weather / etc.
geo	City / neighborhood / national
format	binary / h2h / multi / threshold / range
outcomes	Allowed outcomes
open_at / close_at	Trading/forecast window
resolve_at	Expected resolution time
source_primary	Primary evidence source
source_backup	Fallback evidence source
baseline_snapshot	Starting value(s)
formula	Exact calculation
void_rule	When market is cancelled
status	draft / scheduled / live / locked / resolved / void
result	Final outcome
evidence	Archived screenshots/links/data

14. Moderation Rules for User-Submitted Markets

- Must concern a future event or future measurable state.
- Must have a defined geography and time window when relevant.
- Must have an objective resolution source accessible to BuzzOrBoo.
- Must not depend on private information, harassment, personal tragedy, criminal allegations or sensitive personal data.
- Must not invite manipulation of a tiny metric where one user could easily determine the outcome.
- Must disclose conflicts when a submitter is connected to the business/event being predicted.
- AI may rewrite a submission into market form, but a human-approved rule set governs publication in the MVP.

15. MVP Feed Strategy

Do not launch all 120 at once. Target 40–60 live markets with a deliberate mix of fast and slow resolution.

15–20 fast — Resolve within 1–14 days: weather, weekend review races, reservations, sellouts.

15–20 medium — Resolve within 30–90 days: restaurant buzz, ratings, openings, listings, creator growth.

10–15 long — Resolve within 3–12 months: interiors, fashion, neighborhood trends, annual outcomes.

16. What We Need to Validate Before Development

- Which public/partner data sources can be used reliably and under acceptable terms.
- Whether Google ratings/review counts can be captured in a compliant, repeatable way at the required frequency.

- Which real-estate data can be licensed for individual-property markets.
- Whether users understand probability sliders or prefer Buzz/Boo first with an optional confidence level.
- What minimum sample size makes a market feel socially alive.
- Which local market types create repeat visits rather than one-time curiosity.
- How much market creation should be editorial vs. user-generated in the first beta.

17. Immediate Build Order

1. Freeze the working taxonomy — Keep the 120-market library as the seed set; additions receive new numbers rather than replacing existing markets.

2. Pick 20 prototype markets — Choose the most visual and understandable examples across Boston, property, food, home and style.

3. Define rule sheets — Write complete resolution rules and baseline snapshots for those 20.

4. Design 10 core screens — Onboarding, Discover, Boston Buzz, market detail, make-a-call, rankings, profile, My Calls, Called It, admin.

5. Test without code — Clickable prototype with 20–30 Boston users.

6. Build the points MVP — Mobile-first web app; no real-money contracts.

7. Launch private Boston beta — Measure weekly return rate, predictions/user, markets followed and share rate.

18. Working North Star

BUZZORBOO

CALL WHAT'S NEXT.

The product should make forecasting feel like cultural participation: a place where people can say "I called that" and have a track record that proves it. The local feed keeps the product alive every day; Home and Style make it distinctive; reputation and data make it defensible.

19. The Three-Engine Content System

BuzzOrBoo should not rely on one kind of question. The product has three complementary engines: Forecasts test what happens next; Buzz Battles measure comparative preference; Buzz or Boo captures an instant cultural verdict. Together they create both serious forecasting data and lightweight, highly shareable participation.

FORECASTS - Objectively resolvable future outcomes. Example: Will Madewell's U.S. Google search interest exceed J.Crew's during a defined month? These affect forecasting reputation.

BUZZ BATTLES - Head-to-head or multi-choice preference questions. Example: Who has the better style right now: J.Crew or Madewell? These measure current consumer sentiment.

BUZZ OR BOO - One subject, one fast verdict. Example: Skinny jeans - Buzz or Boo? These create high-frequency participation and a time series of cultural sentiment.

20. Data-to-Question Engine

The market library should not be filled only by editorial brainstorming. BuzzOrBoo should continuously watch public and licensed data for meaningful movement, then use that movement to propose questions. The data does not decide the answer; it decides what is interesting enough to ask.

Signal -> Question -> Forecast Loop

1. **INGEST** - Collect approved signals: search trends, review growth, ratings, reservation availability, opening announcements, social growth, retail/brand interest, real-estate activity and other licensed/public datasets.
2. **DETECT** - Flag acceleration, reversals, convergence, breakouts, unusual growth, two competitors moving together, or a formerly dominant player losing ground.
3. **MATCH** - Pair comparable entities only when the comparison makes sense: same category, similar audience, geography and price/positioning where relevant.
4. **GENERATE** - Create candidate questions in all three formats: a preference Battle, a fast Buzz/Boo verdict, and - when measurable - a future Forecast.
5. **SCORE** - Rank candidate questions by momentum, closeness of competition, audience relevance, novelty, resolvability and expected participation.
6. **REVIEW** - Human editorial review checks fairness, wording, data rights, manipulation risk and whether the question is actually fun.
7. **PUBLISH** - Launch the strongest questions and snapshot all starting values before the first user response.
8. **LEARN** - Use participation, shares, comments and resolution performance to improve what the engine proposes next.

21. What Counts as a Signal?

Convergence - Two brands/trends are both rising and the gap between them is shrinking. This is ideal for a Battle.

Acceleration - One entity's growth rate increases sharply. Ask whether the breakout will continue.

Reversal - A previously declining style, place or product begins rising. Ask 'comeback or fake-out?'

Cross-over risk - A challenger is approaching an incumbent on a measurable metric. Ask whether it will overtake.

Divergence - Two historically similar entities suddenly move in opposite directions. Ask which direction persists.

Local breakout - A restaurant, neighborhood or business grows much faster than its local peer set.

Rating movement - A business approaches a psychologically meaningful rating threshold such as 4.5 or 4.6.

Velocity - Review counts, reservations, followers, searches or sales proxies grow unusually quickly.

Editorial/market catalyst - A menswear launch, creative-director change, store expansion, film release, award, opening or other event creates a reason to compare.

22. Worked Example: J.Crew vs. Madewell

Suppose approved trend data shows J.Crew and Madewell both gaining search interest, while Madewell is strengthening its men's assortment and the gap between the brands is narrowing. BuzzOrBoo should not jump straight to a claim that Madewell will beat J.Crew. It should recognize a competitive signal and create a family of questions.

Engine	Question	Purpose
BUZZ BATTLE	Who has the better style right now - J.Crew or Madewell?	Current preference; does not resolve as a forecast.
BUZZ BATTLE	Who is doing men's style better right now - J.Crew or Madewell?	Segment-specific preference.
BUZZ OR BOO	Madewell Mens - Buzz or Boo?	Fast sentiment pulse that can be repeated monthly.
FORECAST	Will Madewell's U.S. search interest in menswear close at least 25% of its current gap with J.Crew by the end of the quarter?	Objective future outcome using a predefined search methodology.
FORECAST	Will Madewell gain U.S. menswear search interest faster than J.Crew over the next 90 days?	Growth-rate competition.
FORECAST	Will Madewell announce another men's retail expansion or dedicated menswear initiative before the specified date?	Catalyst-based future outcome if an official source can resolve it.

23. Candidate Question Score

A simple internal score can keep the feed from becoming random. This is a product-ranking framework, not a statistical truth; weights should be tuned with beta data.

- Momentum (0-20): Is something materially moving?
- Competitive tension (0-20): Is the outcome genuinely uncertain or is one side obviously dominant?
- Audience relevance (0-20): Do enough target users care?
- Shareability (0-15): Would someone send or argue about this question?

- Novelty (0-10): Does it reveal something users are not already seeing everywhere?
- Resolvability (0-15): For Forecasts, can the outcome be measured cleanly?
- Penalty: manipulation risk, tiny sample size, stale data, mismatched competitors or unclear methodology.

24. Data-Guided Question Families

Brands - J.Crew vs Madewell; Nike vs Adidas; West Elm vs CB2. Trigger when search/review/social trajectories converge or diverge.

Movies & Entertainment - Which film are people more excited for? Which opens bigger? Trigger from trailer/search/ticket-interest momentum.

Restaurants - Who's hotter? Who gains more reviews? Who holds 4.6? Trigger from review velocity, reservations and openings.

Fashion - Which silhouette/color/brand is gaining? Trigger from search acceleration and editorial catalysts.

Home - Chrome vs brass; walnut vs oak. Trigger from search crossover and sustained growth.

Pets & Lifestyle - Best dog breed for apartment living; best first-time-owner breed. Primarily evergreen crowd-intelligence Battles, refreshed by geography and user segment.

Local - Which neighborhood is hotter? Which new business breaks out? Trigger from local review/opening/buzz velocity.

Property - Will a listing sell above ask? Trigger from listing velocity, comps and neighborhood demand where licensed data permits.

25. Guardrails for Data-Driven Questions

- Never imply causation just because two trend lines move together.
- Do not create a Forecast unless the future outcome has a predeclared resolution method.
- Do not compare entities merely because they are famous; the comparison should be coherent to the audience.
- Snapshot the source data and methodology at market creation so the rules cannot move after users respond.
- Avoid questions whose underlying metric can be cheaply manipulated by a small group.
- Use minimum-sample rules for star ratings and review-based questions.
- Respect source terms, licensing and API restrictions; use licensed/approved access rather than brittle scraping as the product scales.
- Label opinion Battles separately from objective Forecasts so users always know what kind of result they are seeing.

26. Why This Matters

This creates a self-renewing editorial system. BuzzOrBoo watches movement in the world, identifies emerging rivalries and breakouts, asks the crowd what it thinks, turns the strongest signals into measurable forecasts, and

then records what actually happened. Over time the platform develops a proprietary history of sentiment, momentum and forecasting accuracy.

28. Beauty, Bags & Accessories - 100-Question Library

A 100-question expansion across makeup, skincare, hair, nails, fragrance, handbags, jewelry and accessories, mixing Buzz Battles, Buzz or Boo sentiment, and objective Forecasts. Boston-specific questions are included throughout.

#	Category	Engine	Question
1	Makeup	Battle	Rhode vs. Rare Beauty: which brand is more exciting right now?

95	Accessories	Buzz/Boo	Silk scarves - Buzz or Boo?
96	Accessories	Buzz/Boo	Big belts - Buzz or Boo?
97	Accessories	Forecast	Will silver-jewelry search growth outperform gold-jewelry growth through year-end?
98	Accessories	Forecast	Will brooch search interest remain above its prior-year level through the next holiday season?
99	Boston Accessories	Battle	Boston: vintage jewelry vs. new designer jewelry - which would you choose for a special piece?
100	Boston Beauty + Style	Multi	Which nominated Boston beauty, hair, nail or accessory business will gain the most Google reviews over the next 90 days?

29. How This Library Feeds BuzzOrBoo

- Rotate questions based on live data, seasonality, launches and social conversation rather than publishing all 100 at once.
- Use Battles and Buzz/Boo for fast participation; graduate strong signals into objective Forecasts.
- Keep comparison dimensions explicit: style, value, quality, repurchase, excitement or future growth.
- For Boston questions, name businesses only after confirming current relevance and a reliable measurement source.
- Turn strong results into share cards, creator debates and brand/business repost opportunities.
- Repeat winning franchises over time so BuzzOrBoo builds a sentiment history, not just one-off polls.

30. Beauty & Accessories Data Signals

- Search acceleration for a product, ingredient, color, hairstyle, fragrance note or bag silhouette.
- Two brands rising together or a challenger closing the gap with an incumbent.
- Retail launches, collaborations, new creative direction, celebrity adoption or major product drops.
- Review-count velocity and rating movement for Boston salons, spas, nail studios and beauty retailers.
- Seasonal crossovers: fall nail color, holiday fragrance, summer hair, handbag materials and hardware.

- BuzzOrBoo's own sentiment movement: a topic jumping from 42% Buzz to 68% Buzz can trigger a Forecast candidate.

31. New Growth Franchises

BEAUTY BATTLE - Two brands or products, one sharply defined comparison.

THE REPURCHASE - Which product would users actually buy again?

WORTH THE SPLURGE? - Premium vs. affordable or two luxury competitors.

THE IT BAG - Recurring handbag race driven by sentiment plus search momentum.

COLOR CALL - Seasonal makeup, nail and bag color race.

BOSTON BEAUTY BUZZ - Local salons, spas, nail studios and beauty businesses competing on a predefined growth metric.

COMEBACK OR BOO? - A formerly dominant beauty/style trend showing fresh data momentum.

32. Everyday Buzz - 100 Irresistible Questions

This is the high-engagement consumer layer that sits on top of the original forecasting backbone. The goal is simple: a user should see the question and immediately want to answer it, argue about it, share it, or see what everyone else said. Questions mix The Call, Buzz Battle, Buzz or Boo, and Forecast formats. Where a question is subjective, it is clearly labeled as sentiment rather than a resolvable forecast.

#	Category	Engine	Question
1	Culture	Buzz/Boo	[CURRENTLY DISCUSSED ACTOR / CELEBRITY] - still Buzz?
2	Culture	Buzz/Boo	The Kardashians - still culturally relevant or officially Boo?
3	Culture	Buzz/Boo	Reality TV - still Buzz?

97	Boston Life	Battle	Uber vs. the T - which would you rather rely on for a night out?
98	Boston Life	Forecast	Will Boston record more than [X] days at or above [TEMP] during the current warm-season window?
99	Boston Life	Forecast	Will a nominated Boston restaurant remain above 4.5 Google stars through the next 90 days?
100	Boston Life	The Call	What is Boston's most overrated neighborhood right now?

33. The Four Consumer Question Engines

FORECAST - What happens next? Objective, time-bound, resolvable and reputation-scored.

BUZZ BATTLE - Which is better, hotter, more useful or more desirable? Comparative crowd sentiment.

BUZZ OR BOO - One subject, one fast verdict. Designed for swipe-speed participation and repeated sentiment tracking.

THE CALL - A larger crowd-intelligence question with several possible answers: best, most overrated, most worth it, best for a use case, or what matters most.

34. Content Portfolio: Backbone + Magnet

The original 120 markets remain the forecasting and data backbone. They should not be deleted simply because some are less playful. The new consumer libraries act as the magnet: questions that create instant opinions, arguments, shares and repeat visits. A healthy feed deliberately mixes both.

- Backbone: measurable forecasts, property, weather, ratings, search crossovers and local business outcomes.
- Magnet: celebrities, brands, groceries, movies, lifestyle, pets, Boston debates, beauty and bags.
- Bridge: when a Magnet question shows unusual movement, generate a related Forecast so sentiment becomes testable.
- Repeat: rerun selected Buzz/Boo and The Call questions monthly or quarterly to build a historical BuzzScore.

35. Question Excitement Filter

Before a consumer-facing question goes live, score it against five simple tests:

- Instant reaction: can someone understand it and have a feeling about it in under three seconds?
- Tension: are there at least two plausible sides, or is the answer too obvious?

- Identity: does answering say something about taste, experience, neighborhood, lifestyle or expertise?
- Shareability: would someone send the result to a friend or post it because they disagree?
- Next question: can the answer naturally generate a follow-up Battle, Buzz/Boo, The Call or Forecast?

36. Example: One Topic Becomes a Content Cluster

WHOLE FOODS can produce a complete BuzzOrBoo cluster rather than one isolated poll:

- Buzz or Boo: Whole Foods - still worth the premium?
- Battle: Whole Foods vs. Trader Joe's - which is better right now?
- The Call: Best supermarket for quality? Best for value? Best prepared food?
- Boston Call: Boston's best supermarket right now?
- Forecast: Will Whole Foods search interest grow faster than Trader Joe's over the next quarter?
- Trend history: Whole Foods BuzzScore this month vs. three months ago.

37. Working Content Mix for the First Public Feed

35% Instant opinion - Buzz/Boo and quick Battles that take seconds to answer.

25% Useful crowd intelligence - The Call questions: best supermarket, best dog for apartments, best neighborhood, best product for a use case.

25% Forecasts - Weather, prices, restaurants, property, brands, fashion and measurable future outcomes.

15% Local Boston - A rotating mix of restaurants, neighborhoods, shopping, weather, events, beauty and everyday life.

38. Updated North Star

BUZZORBOO

WHAT'S HOT. WHAT'S BETTER. WHAT'S NEXT.

Call what's next remains the forecasting promise. The broader consumer experience answers three everyday questions: What is hot? What is better? What happens next? This gives BuzzOrBoo both an addictive social surface and a serious forecasting/data engine underneath.

39. LIVE PRODUCT DOCTRINE - The World Chooses the Subjects

BuzzOrBoo must never feel like a question bank written weeks ago. The Bible stores durable question structures, triggers and rules; the live product fills those structures with the people, films, brands, restaurants, trends and prices that matter that day. Specific names in the Bible are examples unless explicitly marked evergreen.

THE BIBLE DEFINES WHAT TO ASK.

THE WORLD DETERMINES WHO AND WHAT WE ASK ABOUT.

40. Question Clocks & Expiration Rules

Clock	Typical life	Examples	Rule
EVERGREEN	Months	Whole Foods vs. Trader Joe's; best dog for apartment living.	Refresh results every 90-180 days or after a meaningful data shift.
SEASONAL	2-12 weeks	Fall color race; summer Boston neighborhood; holiday fragrance.	Schedule automatically ahead of the relevant season; archive when the window closes.
NOW	24 hours-14 days	Celebrity moment, viral product, movie heat check, breaking local debate.	Expire aggressively once search/social momentum falls or the event passes.
EVENT-DRIVEN	Until event	Opening weekend, restaurant opening, awards, sellout, property closing.	Close before outcome is known; resolve from the predefined source.
ROLLING FORECAST	7-90 days	Gas higher/lower; airfare cheaper; review count growth.	Re-open as a fresh dated market after the prior one resolves.
RECURRING PULSE	Weekly/monthly	Hottest in Boston; Still Buzz?; It Bag; Best supermarket.	Run on a fixed cadence to create a comparable time series.

41. Existing Library - Freshness Conversion Rules

The following conversion rules apply retroactively to the original 120 markets, Beauty 100 and Everyday Buzz 100. This is how expiration-date questions stay useful:

- Named upcoming films become [UPCOMING FILM A] vs. [UPCOMING FILM B]. The live pair is selected 7-21 days before release based on search momentum, ticket interest and editorial relevance.
- Named celebrities in relevance questions become [CURRENTLY DISCUSSED PERSON]. The live subject is chosen only when a measurable conversation spike exists.
- Phrases such as this fall, this summer or by Labor Day are publishing variables, not permanent copy. The CMS inserts the current seasonal window and exact resolution date.
- Travel-price questions use [LIVE ROUTE] + [DEFINED TRAVEL DATES], selected from routes showing meaningful search/price interest.
- Local restaurant/business slots use current nominees based on openings, review velocity, reservation pressure, ratings and local editorial signals.
- Brand battles may remain named when structurally evergreen, but the system refreshes them only when data shows renewed competitive tension.
- Any question whose subject is no longer culturally relevant is archived rather than kept alive for filler.

42. The 100 Killer Live Question Franchises

These are durable templates designed to generate office-talkable questions every week. Bracketed fields are populated from live data. Each template includes the best engine and the signal that should trigger it.

#	Family	Engine	Reusable live template	Trigger	Shelf life
1	Office Talk	Buzz/Boo	[PERSON] - still relevant?	Search/social spike or new project	3-14d
2	Office Talk	Buzz/Boo	Did [PERSON/BRAND] just become cool again?	Reversal after sustained decline	7-30d
3	Office Talk	Buzz/Boo	[TREND] - already over?	Momentum peaks then slows	3-14d
4	Office Talk	Battle	Who is having the bigger moment: [A] or [B]?	Two rising peers	3-14d

100	Lifestyle/Pets/Travel	Forecast	Will [DESTINATION/ACTIVITY] search interest remain above baseline through the next travel window?	Seasonal breakout	30-90d

43. The Daily Question Machine - Step by Step

1. INGEST - Pull only approved public/licensed signals: Google Trends or equivalent search data, official release calendars, public prices, ratings/reviews where permitted, reservation availability, business openings, real-estate feeds, official announcements, and BuzzOrBoo's own response data.

2. NORMALIZE - Put signals into comparable time windows and peer groups: day-over-day, week-over-week, year-over-year, local peer set, category peer set.

3. DETECT TENSION - Look for acceleration, reversal, convergence, crossover risk, breakout, rating threshold, price move, new launch or unusually high conversation velocity.

4. FILL A TEMPLATE - Match the signal to one or more of the 100 Killer Live Question Franchises. Data chooses the subjects; the template supplies the structure.

5. **SCORE THE IDEA** - Rank on freshness, uncertainty, relevance, shareability, local value, resolvability and manipulation risk.
6. **HUMAN EDIT** - An editor approves, rewrites or rejects. BuzzOrBoo should sound observant and witty, not autogenerated.
7. **SET THE CLOCK** - Assign publish time, peak window, close time, expiration and archive/refresh rule before publishing.
8. **SNAPSHOT EVIDENCE** - For Forecasts, save the starting data, exact source, calculation and backup source.
9. **PUBLISH** - Place the question in the correct feed modules: The Daily 5, Boston Buzz, category feed, personalized feed or Forecast board.
10. **WATCH** - Track participation velocity, comment rate, shares, probability movement and whether the underlying data is still moving.
11. **FOLLOW UP** - If a question breaks out, create the adjacent Battle/Buzz-or-Boo/Forecast instead of repeating the same wording.
12. **ARCHIVE & LEARN** - When it expires or resolves, save the result, update user scores, create a historical chart and feed performance back into future question selection.

44. Freshness Score - What Gets Onto the Home Feed

Component	Weight	Question
Freshness	25	How recent is the signal and is momentum still active?
Talkability	20	Would a person bring this up at lunch, in a group chat or at work?
Uncertainty	15	Is there genuine tension, or is the answer obvious?
Personal relevance	15	Does it match the user's city/categories/history?
Shareability	10	Would the result card be worth sending or reposting?
Data strength	10	Is the trigger based on enough reliable data?
Resolution quality	5	For Forecasts, can the outcome be resolved cleanly?

Hard rule: a stale question cannot buy its way onto the feed with historical popularity. Freshness is a gate, not just another ranking factor.

45. The Website/App - How It Fits Together

BuzzOrBoo should feel simple to the user even though the content engine underneath is sophisticated. The consumer journey is: SEE -> CALL -> DISCOVER -> SHARE -> RETURN -> BUILD REPUTATION.

Screen	What user sees	Job
0. Landing / logged-out	Show 3-5 live questions immediately. Let visitors answer one before account creation.	Prove value before asking for signup.
1. Onboarding	Pick city, interests and 3 quick sample calls.	Personalize the first feed immediately.

2. Home - WHAT'S BUZZING	Dynamic mixed feed. Top module is THE DAILY 5. Then Boston/local, personalized Battles, Buzz/Boo, Forecasts and results.	Daily habit.
3. THE DAILY 5	Five questions chosen each morning for maximum freshness/talkability.	The watercooler product inside the product.
4. Boston Buzz	Restaurants, neighborhoods, prices, property, weather, openings, local style/beauty and events.	Geographic identity and repeat use.
5. Category Hubs	Style, Beauty, Home, Food, Brands, Entertainment, Money, Travel, Pets, Property.	Deep interest browsing.
6. Question Card	Image/headline, one clear question, live percentage, calls count, CTA. Minimal rules until tapped.	One-second comprehension.
7. Question Detail	Trend history, why it is being asked now, source/context, comments, related questions and rules.	Turn a tap into understanding.
8. Make Your Call	Buzz/Boo tap, A/B choice, multi-choice, or probability slider for Forecasts.	Frictionless participation.
9. Instant Result	Show crowd split, user position, movement vs. yesterday and a share card.	Reward participation immediately.
10. Related Next Call	Serve 1-3 logically adjacent questions.	Increase session depth without infinite random scrolling.
11. My Calls	Open calls, resolved calls, Called It, category performance and calibration.	Build ownership and reputation.
12. BuzzRank / Profiles	Category expertise, streaks, calibration, top calls, followers.	Social proof and creator layer.
13. Archive / Then vs. Now	Past polls and forecasts with historical charts and refresh links.	Turn expired content into cultural memory.
14. Create / Suggest	Users suggest a question; AI converts it to a template; editorial review gates publication.	Community content without losing quality.
15. Admin / Editorial Desk	Signal queue, candidate questions, freshness score, rule sheet, schedule, moderation, resolution and analytics.	Operational control center.

46. Home Feed Composition - First Beta

Module	Target share	Purpose
THE DAILY 5	5 fixed slots	Always fresh; selected each morning.
NOW / Office Talk	25-30%	Current culture, brands, entertainment, viral debate.
Boston / Local	25-30%	Restaurants, neighborhoods, prices, property, openings, weather.
Personal interests	20-25%	Beauty, Home, Style, Pets, Travel, etc. based on onboarding and behavior.
Forecasts	10-15%	Measurable future outcomes; enough to build forecasting identity without making the feed feel financial.
Results / Then vs. Now	5-10%	Resolved or dramatically moving questions worth revisiting.

47. The Daily 5 - The Office-Talk Habit

Every morning, BuzzOrBoo publishes five questions that should make sense if someone says them aloud at work. Suggested mix:

- 1 current culture/entertainment question: the person, movie, show or story having the biggest conversation spike.

- 1 everyday argument: supermarket, brand, product, money, travel or lifestyle.
- 1 Boston question: restaurant, neighborhood, local price, weather, business or event.
- 1 style/beauty/home question: visually strong and trend-aware.
- 1 Forecast: a measurable call that will resolve soon enough to create anticipation.

Editorial test: If an editor cannot imagine two coworkers disagreeing about it today, it does not belong in The Daily 5.

48. Question Card Anatomy

Element	Example	Purpose
Eyebrow	BOSTON · FOOD · LIVE 7 DAYS	Immediate context.
Headline	WHO'S HOTTER RIGHT NOW?	Branded, emotional framing.
Question	[Restaurant A] vs. [Restaurant B] - where would you book tonight?	Specific decision.
Visual	Two strong images or one hero image.	Stops scroll.
Live result	A 54% / B 46%	Creates tension.
Movement	A +8 pts since yesterday	Shows that the crowd is alive.
Social proof	12.4K calls	Participation signal.
CTA	MAKE YOUR CALL	One action.
Why now	Both restaurants are among the fastest-growing local review/search signals this week.	Optional context drawer.
Clock	Closes Sunday 8 PM	Makes freshness visible.

49. Question Detail - Why Now?

Every dynamic question should answer the user's unspoken question: Why are you asking me this today? The detail screen can show a concise signal card without exposing proprietary ranking logic.

- TRENDING: search interest +42% week-over-week.
- CLOSING THE GAP: Brand B moved from 62 points behind Brand A to 21 points behind.
- BOSTON BREAKOUT: review velocity ranks top 5% among comparable local restaurants.
- COMEBACK: interest reversed after six months of decline.
- NEW: launch/opening/premiere happened this week.
- MOVING: crowd opinion changed 14 percentage points in 48 hours.

50. Expiration, Archive & Refresh Workflow

Stage	Action	Why
Before publish	Set expire_at and refresh_rule.	No live question without an end condition.
During peak	Promote while underlying signal remains active.	The feed reflects the present.
Near expiry	Reduce ranking unless a fresh event extends relevance.	Avoid stale home feed.
Expire	Stop new responses; keep result visible.	Preserve integrity.
Archive	Store result, chart, comments, source snapshot and user calls.	Build cultural memory.
Refresh	Create a new dated instance using the same franchise if the topic is relevant again.	Comparable history without pretending the old poll is current.
Then vs. Now	Show previous result next to new result.	Creates compelling longitudinal content.

51. The Editorial Desk - Human + Data

The admin product is as important as the consumer app. It should look like a newsroom crossed with a trend dashboard.

- **SIGNALS:** ranked list of emerging movements by category/city.
- **QUESTION SUGGESTIONS:** 3-5 template-generated options for each signal.
- **FRESHNESS SCORE:** automated ranking plus explanation.
- **RULE BUILDER:** resolution source, baseline snapshot, close time and void rules for Forecasts.
- **CALENDAR:** scheduled seasonal questions, premieres, openings and recurring franchises.
- **LIVE BOARD:** participation velocity, movement, comments, shares and abnormal activity.
- **EXPIRING SOON:** questions that need archive, extension or refresh decisions.
- **RESULTS DESK:** resolve Forecasts, generate result cards and trigger user scoring.
- **CONTENT GAPS:** categories/users with too few fresh questions today.

52. CMS / Data Fields Added in v0.5

Field	Purpose
template_id	Links a live question to its durable franchise.
clock_type	evergreen / seasonal / now / event / rolling / recurring
signal_type	acceleration / reversal / convergence / breakout / threshold / catalyst
signal_strength	Normalized internal measure of trigger strength.
why_now	Short user-facing explanation.
publish_at	Scheduled go-live time.
peak_until	Expected strongest relevance window.
expire_at	Stops responses / removes from live ranking.
refresh_rule	When/how a fresh instance should be created.
freshness_score	Home-feed ranking input.
example_subjects	Optional editorial placeholders; never treated as permanent.
parent_question_id	Links follow-ups and refreshed versions.
series_id	Links recurring franchises for longitudinal charts.
currentness_status	candidate / fresh / cooling / expired / archived

53. Build Sequence - From Bible to Working Product

PHASE 1 - CONTENT SYSTEM - Tag every existing question as Evergreen, Seasonal, Now, Event, Rolling or Recurring. Assign a template_id to dynamic ones.

PHASE 2 - EDITORIAL MVP - Build a simple admin screen where an editor can create a question from a template, set its clock, source and image, then publish.

PHASE 3 - CONSUMER MVP - Landing, onboarding, Home, Daily 5, Boston, category pages, question detail, call/result, profile and share cards.

PHASE 4 - MANUAL DATA - Initially, editors can manually enter signal notes and source snapshots. This gets the product live without waiting for every API.

PHASE 5 - AUTOMATED SIGNALS - Add approved APIs/data feeds category by category; start with the sources that produce the most useful questions.

PHASE 6 - QUESTION ASSISTANT - Use AI to suggest template matches and wording, but keep human approval before publication.

PHASE 7 - PERSONALIZATION - Rank by city, interests, previous calls, category expertise and freshness.

PHASE 8 - HISTORICAL INTELLIGENCE - Then vs. Now charts, Buzz history, category indexes and B2B trend dashboards.

PHASE 9 - USER CREATION - Allow high-quality user suggestions with AI rule conversion and editorial moderation.

PHASE 10 - MONEY LATER - Only after product-market fit and specialist legal work should regulated real-money event-contract integration be considered.

54. v0.5 Working North Star

BUZZORBOO

CALL WHAT'S NEXT. KNOW WHAT'S BUZZING NOW.

BuzzOrBoo should feel as if it woke up that morning. The product combines what people are talking about now with what they think will happen next. Evergreen questions give it depth; live questions give it urgency; local questions give it identity; Forecasts give it credibility; historical results give it memory.
